	Total		

* The Safety cage (skid) is included in the first build out , however; it is only needed to keep large debris away from the gun array and to keep the guns off the deck. The safety cage is a protection device and considered a consumable because it is not required for actual operation of the Tri-Cluster. The cage can be removed during operations when debris and collisions are unlikely and used just as an array caddie.

*** Hydrostatic testing of Umbilical should be done at least once per year

**** Vendor delivery costs are used to transport equipment to and from other vendors. This is not a delivery charge! (i.e. to and from powder coating and other testing facilities)

Offsite labor for Mobilizing equipment or training clients is billed at \$2,000 per day

Prices subject to change. All costs are quoted in USD

A Deposit of 50% of the purchase price is required to start the build out process. Total build out time is Six (6) weeks from A.R.O. & deposit. Expedited orders are accepted on a case by case basis and may incur a 10% expediting fee. (please let us know your time table as we do keep some equipment on the shelves)
